*Warwood Armature
Repair Co.*

8/9/17

At Warwood Armature, we have been using one of Star Technology's VPI resins since October of 2015 and have been very pleased with our decision to make them our supplier for VPI resin. We process various form wound and mush wound armatures, stators & field coils thru our VPI systems. The motors we repair are exposed to harsh environments, therefore we really look for a visible resin build on our windings. The resin in our tank, prior to switching over to Star, wasn't delivering the build we like to see and the manufacturer wasn't much help in improving it. Since we started adding Star's products to our tank, the build has steadily improved and they have been very helpful in blending our resin to get the favorable results and provide our customers with a quality rewind. We are a satisfied customer and happy to recommend Star to other motor shops.
